

Why Private Data Network vs Shared Network?

Iris Networks is proud to offer Private Data Network (PDN) as the superior choice over Shared Network. Discover the unparalleled value and reliability of our PDN, delivering exceptional performance at a competitive price point.

Shared Network

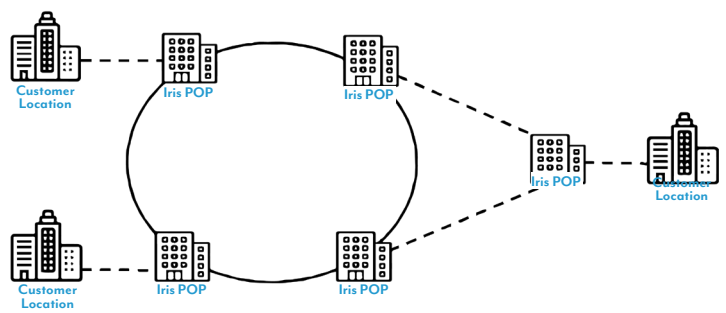

Equipment

- ✔ Subject to network maintenance schedule
- ✔ May not meet all custom requirements
- ✔ Generally shorter terms and lower day one cost

Fiber

- ✔ Routes between nodes are not fixed (subject to change)
- ✔ Fiber out to customer site must tie back to Partner POP
- ✔ Traffic traversing is shared with all customers
- ✔ May not meet all route requirements

Private Data Network

Equipment

- ✔ Guaranteed ability to scale
- ✔ More control over network maintenance
- ✔ Installed in customer space for top physical security
- ✔ Can customize to meet all requirements

Fiber

- ✔ Routing between dedicated nodes can be customized
- ✔ Can connect directly between customer sites
- ✔ Often easier to justify larger network builds
- ✔ Can meet all custom requirements

Iris Networks' PDN surpasses shared networks with its enhanced security, privacy, and dedicated infrastructure. It ensures consistent and reliable performance, while offering greater customization and control. Additionally, PDN provides exceptional scalability, enabling businesses to seamlessly expand their network infrastructure as needed.
